AFFIDAVIT OF NANCY SMITH

1. My name is Nancy W. Smith. This affidavit is in support of BellSouth's Petition to Extend Time for Network Implementation.
2. I currently hold the position of Manager, LNP - Network Service Assurance/Delivery/Process Management at BellSouth Telecommunications, Inc. (BST). As Project Manager for Local Number Portability Centers and Systems at BST, I have knowledge of the project effort to implement centers systems and processes to support long-term database method number portability (LNP) and LNP intra-company testing.
3. The purpose of the BST intra-company testing effort was to ensure operational readiness of systems, centers and personnel to be ready to perform number portability throughout the BellSouth network. The process we used to document our tests is being recommended as the process for intercompany testing of LNP after NPAC delivery and acceptance.
4. The following table illustrates the milestone data, completion date and percentage of completion of this effort.

<u>Milestone</u>	<u>Milestone Date</u>	<u>Actual Completion Date</u>	<u>Percent Complete</u>
Identified OS Systems	5/31/97	5/31/97	100
Process Flows Documented	6/30/97	6/25/97	100
Documented Software Requirements	6/16/97	9/1/97	100
Documented Hardware Requirements	6/16/97	6/16/97	100
SW Installed to Test Environment	9/1/97	10/1/97	100
SW Installed to Production Environment	9/15/97	10/4/97	100
BTAC Testing Completed	9/14/97	9/24/97	100
Draft M&P's Completed	9/14/97	9/14/97	100
Network Integration Completed	9/12/97	9/23/97	100
Intra-Company End-to-End Test Completed	9/30/97	10/31/97	100
Training Completed	10/31/97	10/31/97	100*
Implementation Completed	10/31/97	10/31/97	100*

***Percentage of deliverables required for Intra-Company End-to-End Testing.**

5. The Intra-Company End-to-End test plan was deployed with the issuance of the first service order porting out a pre-designated account on September 25, 1997. Over the next 37 days, the team of 108 SME/testers issued a total of 49 orders. The orders were tracked

across 31 OS systems ranging from SOCS to 911. Since no fully integrated test environment existed for these systems, all testing took place in the Georgia production environment.

6. The complexity of the test cases typically involved customer accounts being ported out during one step, then ported back during the next. This required coordination of both tasks and communication between testers. Keeping testers abreast of changing account statuses proved critical to those involved in the sequence of events.
7. This coordination was the responsibility of Mission Control, which was established on September 22, 1997 for the central coordination of all test activities. The control room was located on the 37th floor at BSC and its staff provided support to the test team. Its primary function was the communication of service order issuance and status via alphanumeric pagers issued to the entire test team. "Broadcast pages" signaled the start and end of the individual tester's activity on the prescribed account.
8. Mission Control was staffed Monday through Friday from 8:00 am through 5:30 pm and maintained an open voice bridge for the reporting of problems and scheduled team conferences. During the 40 days of preparation and testing, status boards were maintained noting progress of test accounts, as well as problems discovered in software and their affect on test cases. Mission Control also maintained and published a status report for each day of testing. This report chronicled a daily log of events, issues and their resolution, and listed events planned for the next day of testing. These status logs have been maintained as part of the permanent project documentation.
9. Below is an Overview of End-to-End Test Results:
 1. Provided detailed test plan of LNP Intra-Company End-to-End Testing with documented results available for FCC/PSC submission.
 2. Successfully issued 30 Service Orders which were provisioned and billed as Ported Out.
 3. Successfully issued 19 Service Orders which were provisioned and billed as Ported In.
 4. Recorded 2,504 completed test logs (5 binder volumes) which provide documented results of tests performed.
 5. Maintained cumulative daily status log to provide complete diary of events and document issue identification and subsequent resolution.
10. To ensure BellSouth's readiness to perform Inter-Company Testing upon delivery of the NPAC system, Phase 2 Intra-Company Testing is planned for 2Q98. During Phase 2 testing, software releases installed since October, will be exercised.

My Commission Expires Sept 2, 1999

AFFIDAVIT OF ALLENA KENDRICK

1. My name is Allena Kendrick. This affidavit is in support of BellSouth's Petition to Extend Time for Network Implementation.

2. I am an independent contractor engaged by BellSouth Telecommunications, Inc. (BST) as a project manager for BST's LNP Gateway Software Application project. In this capacity I have personal knowledge of the facts set forth herein.

3. LNP Automation Project. The LNP Automation Project was convened to develop a mechanical means to process eligible LNP requests in a flow-through manner. Since formation, it has purchased and installed the server hardware for test and production, purchased and installed server hardware for development, developed custom application software, developed methods and procedures for the new systems, and developed methods and procedures for impacted work centers.

4. LNP Gateway Application. The LNP Gateway Application consists of the following ten major functional areas that were production ready in LNP Gateway Operating System (LNP GW) release .7, developed by BellSouth Applied Technologies, on October 10, 1997, to the Atlanta, Georgia and Charlotte, North Carolina production platforms:

1. ***NPAC SMS Interface Functionality - LNP GW Release .7 on production platforms in Atlanta, Georgia and Charlotte, North Carolina, available 10/10/97***

The LNP Gateway interacts with the NPAC SMS across 2 different interfaces. These interfaces are known as the Service Order Administration (SOA) interface and Broadcast Interface (BB). The SOA interface is used to create LNP subscriptions, modify/cancel LNP subscriptions, exchange porting authorizations, send activation notices and provide ported number disconnects from BellSouth to the N3P NPAC SMS. The BB interface is used by the LNP Gateway to receive Routing Data from the N3P SMS and submit it to the BellSouth AIN SMS system. The following major functions are supported by this sub-system of the LNP Gateway across both of the interfaces:

- View, Create, Modify, Cancel, Activate, Disconnect LNP Subscriptions
- Handle Notifications of subscription information from the NPAC SMS
- Receive automatic download of Network Data (new switches, NPA-NXX or LRN data) to be provided to AIN SMS
- View and Update BST Service Provider information at the NPAC SMS
- Keep an on-line storage of all Network Related data updates for 90 days; keep archival storage of Network Related data older than 90 days for up to 2 years

2. *EDI Interfaces Issue 6 Functionality - available 10/10/97*

The LNP Gateway supports an EDI interface which allows the CLEC's to submit porting requests to BellSouth via the existing EDI translator and the LSR Router. The porting request results in the initiation of the porting process and all the subsequent steps that are taken to complete the port successfully. This interface allows the CLEC to receive the Firm Order Confirmation (FOC). The following major functions are supported by this sub-system of the LNP Gateway across both of the interfaces:

- Receive an LNP Local Service Request (LSR) from the EDI Gateway via the LSR Router
- Submit Acknowledgments for LSR received from EDI Gateway via LSR Router
- Submit an FOC to the EDI Gateway via the LSR Router for an LNP LSR
- Receive Acknowledgment for FOC sent to EDI Gateway via LSR Router
- Testing: CLEC's were requested to LNP-EDI with BellSouth. CLEC's did not want to participate in testing process

3. *NISC Report for Switch Translations - available 9/1/97*

The NISC report generated by the LNP Gateway allows for the correct scheduling of Switch Translation work that needs to be performed by the NISC technicians at CO's.

4. *AIN SMS Interface Functionality - available 6/17/97*

The LNP Gateway can submit Routing Data from N3P SMS to the BellSouth AIN SMS. The AIN SMS system would use the routing information to update the AIN SCP database for call routing. The LNP gateway will also support Operator Services inquiry for getting the most current routing information from the AIN SMS.

- Update Network data received from NPAC SMS in the AIN SMS system
- Update Network data based on prompt from the Trouble Administrative system
- Retrieve Network data from AIN SMS based on queries from the Trouble Administration system

5. *Local Carrier Service Center (LCSC) Administration System - available 10/10/97*

LCSC Administration System contains the following sub-systems:

Subscription Sub-system: This sub-system allows the LCSC service representative to perform the following major functions:

- Create, Cancel, Modify, Activate, Disconnect, View LNP subscriptions via the LNP Gateway N3P SMS sub-system
- View Subscription Notifications that have been received by the LNP Gateway N3P sub-system

Service Request System: This sub-system allows the LCSC service representative to perform the following major functions:

- Create Service Requests on behalf of a CLEC
- Track Service Requests submitted by CLECs
- Associate Service Requests with Service Order information
- Associate Service Requests with Unbundled Loop Connects and Disconnects
- Generate reports on Service Requests
- All these sub-systems have a GUI interface which allow the work centers to manipulate the data with multiple windows/pages

6. *Trouble Administration Work Center System - available 11/13/97*

This sub-system provides the following major functions which can be used by several of the Trouble Administration Work Centers:

- Retrieve/View Network Data from the NPAC SMS via the LNP Gateway N3P SMS sub-system
- Download Network Data from the NPAC SMS via the LNP Gateway N3P SMS sub-system
- View Network Data existing currently in AIN SMS
- Update Network Data in AIN SMS

7. *LNP Gateway Billing/CARE Interface - available 7/1/97*

This sub-system involves the generation of a nightly file that needs to be transmitted to the Billing and CARE systems. This file contains ported number historical information including service provider identification.

8. *Integration & Interoperability Testing of Phase One Functionality - 5/1/97 through present*

Integration testing covered full end to end testing of the applications developed prior to the software release. Test plans and scripts were developed to ensure that thorough testing was accomplished. Interoperability testing of Phase One

functionality includes both internal and external testing of the application in a pre-production and full production configuration. This includes Test Plan development for Stack to Stack, Gateway to Gateway, End to End, and Beta Tests. Also included is the management and execution of the interoperability tests previously mentioned.

Turn-up testing Phase 1 with Perot Systems Software

Pass: 64

Fail: 10

87% pass rate

Turn-up testing Phase 2 with Perot Systems Software

Pass: 34

Fail: 11

Pend: 7

66% pass rate

Note: The pending test cases deal with audits, where several defects still exist in the Perot Systems Software

Turn-up testing Phase 3 with Perot Systems Software

Pass: 11

Fail: 11

Pend: 65

13% pass rate

Note: There are not 87 unique test cases, however, many test cases are repeated to test various failure possibilities

Cumulative pass rate: 55.5%

9. ***Connectivity to BellSouth Repair Centers via the Trouble Administration Work Center Sub-system - available 11/13/97***

BellSouth Repair centers are able to view information from the NPAC.

10. ***Connectivity to the Network - available 9/1/97***

BellSouth Network can broadcast activation messages to the NPAC.
